Objective

As a Computer Science graduate, I am in pursuit of opportunity to apply my computer science knowledge to teach and solve real life problem. I want to make distinguished contribution in the field of Computer Science by conducting procedural research through exploring the state-of-threat technologies. I am ready to devote myself for learning, increasing my skills as well as developing myself as an efficient Computer Science teacher as well as researcher.

Education

- **Daffodil International University**

- B. Sc. In Computer Science & Engineering (2016-2019)**

Key Courses – Programming and Problem Solving, Discrete Mathematics, Object Oriented Programming, Data Structure, Algorithms, Data Communication, System Analysis and Design, Computer Architecture, Microprocessor, Embedded Systems, Database Management System, Software Engineering, Database, Compiler Design, Operating Systems, Web Engineering, Artificial Intelligence, Computer Networks, Computer Graphics, Data Mining.

- **Hermann Gmeiner College, Bogra**

Higher Secondary Certificate | Science | 2014 | GPA – 4.50 out of 5.00

- **Hermann Gmeiner College, Bogra**

Secondary School Certificate | Science | 2012 | GPA - 5.00 out of 5.00

Thesis

- **Vegetable detection using Computer Vision & Deep Learning (Running)**

An experimental approach to detect vegetable using machine learning techniques. This paper proposed an intraclass vegetable detection and prepared various model architectures (VGG-19, VGG-16, MobileNet).

Work Experience

- **Teaching Assistant, Department of CSE (March 2022 - Current), Daffodil International University**

Key Responsibility:

1. Assist Supervisor to prepare course content appropriately.
2. Counseling students to apply and practice what is learned.
3. Undertaking various types of training in planning and implementing effective classroom management practices.
4. Practicing strict adherence to rules during classroom management and examination.

Courses Taught (Assist):

CSE 311: Database Management System, CSE 333: Software Engineering, CSE 423: Information Security

- **Intern, Leotech BD.**

I worked in this company as an intern for two months (October 1, 2020 – November 30, 2020). My objective of internship was to become familiar with web development practically. This company is one of the renowned banking software producers in Bangladesh. My job was to understand how to build website using PHP, Laravel framework and MySQL. Moreover, I was able to learn few basics of web design.

Technical Skills

- **Programming/Scripting Languages**

○ C ○ Java ○ JavaScript ○ Assembly ○ PHP ○ Bootstrap

- **Database Management System**

○ MySQL

- **Library**

○ OpenGL

- **Framework**

○ Java Swing

- **Others**

- HTML ○ CSS ○ XML

Workshop and Training

1. Effective Classroom managements
2. OBE, Bloom's Taxonomy, Assessment, Examination and Evaluation
3. Designing Alternative Assessments - In Inclusive Teaching & Learning
4. Research Methodology
5. Training on How to Make My Teaching Visible
6. Learner Centric Classroom
7. How to become the best teacher
8. Setting and Achieving Focus, Goals and Targets
9. TAF 2022 Assessment's and Selection Bootcamp
10. Android App Development (Workshop)
11. Web development
12. Web design
13. Teaching Apprentice Fellowship Program (Training, March 2022 - Current)

Also participated in different numerous **webinars, workshops**.

Software Projects

- **Automatic Traffic System Using Google API**

Technologies: Java Swing, MySQL

Timer of every signal lane will set dynamically. Our application will get data of live traffic from google API then calculate the timer using API data then save the timer to database. Lane will set a time, which data will come from our database. And there are also other features.

- **A Rainy Day**

Technologies: C and OpenGL

It was a 2D scenario, which made by using C language consist with OpenGL library. In that scenario, at first there was an empty, blue sky and some trees. Then some people started walking from one side to another side by the road. After that, the color of the sky changed slow and started raining. Because of the raining, people start running. And then the road again become empty.

- **Tourism Guidance**

Technologies: PHP, MySQL

Here, website's admin added all kind of helpful information (how to go there, when you should go, staying and eating places) of a place to visit. On the other hand, visitors only can see those information's and got some ideas to make a trip.

- **Calculator**

Technology: Assembly Language

It was a simple calculator, which only could perform addition, subtraction, multiplication, division of two numbers. The entire work was done by the user.

- **Chatting system**

Technologies: Java Swing Application, MySQL

It was a simple chatting application built in java. Here, at first a person had to create an account. All Data of user were stored in MySQL database. And one person could chat with another person with the help of database. But user must have to use the same computer [Because for storing the chatting history, we needed same database].

- **Math Learning Tool**

Technology: Java

This project helped a person to learn basic arithmetic operations of mathematics. This application randomly generated two mathematical number and then took a mathematical operation based on user choice (addition, subtraction, multiplication, division). After got that choice, the result produced. And if got something divided by 0, then an error message appeared on the screen.

Hardware Projects

- **Robo Guard**

Technology: Arduino

Hardware module: Arduino, Servo Motors, Ultrasonic Sensor, LED's, Buzzer

The robot was consisting of some modules for different purpose. Initially, the robot stands on a fixed place and rotate in half circular way. By the use of ultrasonic sensor, it detected object in a specific range. It had two range mode; one is for warn (in between of safety and warning range) the object and another is for firing on that object (because that object crosses the safety line). LED's and buzzer had used for completing those purposes.

- **Simple Health Checkup Device**

Technology: Arduino

Hardware module: Arduino, Finger Sensor, Thermometer, Heart Rate Sensor

At first, user had to start the sensor by touching the finger sensor. After that, the thermometer started working and took the temperature of the user. Then heart rate sensor started working and took the current heart rate of the user. Finally, all the data showed in computer screen.

Scholarship and Achievement

- **General Grade Scholarship (Class-v, government)**
- **General Grade Scholarship (Class-viii, government)**
- **Hermann Gmeiner Award (Class-xii, from foreign bodies in the college)**

Memberships

- **Cyber Security Club**

Former member of Cyber Security Club which was created by a handful of experienced cyber security enthusiasts.

Volunteering Works

- **Winter clothing distribution activities**

I worked and volunteered with "Winter Clothing Distribution Program" during my school and college days.

Reference

- **Professor Dr. Touhid Bhuiyan**

Professor and Head

Department of Computer Science and Engineering

Daffodil International University

- **Ms. Zakia Zaman**

Lecturer (Senior Scale)

Department of Computer Science and Engineering

Daffodil International University
